SDC Hackathon 2026 - RunPod Proof of Use

Team 16.0 | Project: ShiftHappens

Status: Not applicable.

ShiftHappens does not use RunPod. The submission requirement lists RunPod proof of use "if applicable".

Reason: the application has no GPU workload. Its only AI step sends CV text (after emails, phone numbers and Malaysian IC numbers are removed) to the Google Gemini API. All other parts - task baskets, role ranking, learning plan and fairness check - are fixed Python formulas that run on the Replit deployment.

Compute used instead: Replit Deployments (Autoscale), live at https://sdc-hackathon-2026-team-160.replit.app. See SDC2026_16.0_Replit_POU.pdf and the Technical & Tools Declaration.
